

2014 Field Day Results

In this year's event, 47,428 participants made over 1.2 million contacts.

Matt Wilhelm, W1MSW, w1msw@arrl.org

Operating from mountaintops, parks, emergency operation centers, and homes across North America, 47,428 operators participated in the 81st annual ARRL Field Day. Always the fourth full weekend in June, Field Day provides an opportunity to showcase Amateur Radio to the public, while practicing the skills necessary to deploy and operate portable stations. An event that is never short on challenges, participants put their knowledge and equipment together to make as many contacts as possible, while attempting to circumvent the many challenges that Mother Nature and Murphy regularly present over the weekend. Though it is not a contest, Field Day does provide a point-based scoring system to make it easier for participants to evaluate their efforts each year.

The Best-Laid Plans

Field Day operations are over the course of a weekend, but preparation for the event begins weeks and sometimes months in advance. Site planning, testing and inventory of equipment, press releases to local media outlets, and invitations to elected and agency officials are all important elements of a suc-

cessful operation and must be executed long before the first exchange is made. For the 2093 stations that reported operating using only emergency power, careful consideration had to be given to the amount of power used to transmit signals and conservation of fuel to ensure stations would remain on the air throughout the event. Safety is also an important part of Field Day planning, and because the majority of operations are outdoors, sites must prepare for the constantly changing conditions.

Even the most thoroughly prepared stations can be challenged by the weather. June provides the Northern Hemisphere with shelter from the cold, but it also exposes us to the elements associated with summer in North America. This year, a large band of precipitation was recorded from the far reaches of the Northwest all the way down to Florida, and many Field Day stations reported heavy rain at their sites. Ed, KF8PD,

from Chickasaw Amateur Radio Association wrote that it was one of the wettest Field Day events he had ever attended, but pointed out, "How many emergencies happen during perfect weather conditions?" High temperatures throughout the weekend were in the 100s across the south and southwest and gradually faded into the 80s to the north. These conditions tested the will and stamina of operators to assemble their stations and operate continuously throughout the weekend.

Conditions and Demographics

Although we will be moving past the peak of Solar Cycle 24, solar conditions were similar to last year, with almost identical solar indices. Participants reported that contacts were made on 10 meters, but that conditions were not optimal. In contrast, activity on 15 meters and below was very good across all regions. Total QSOs reported this year were down

just slightly, despite an increase in the number of participants. We also saw a decrease in the number of phone QSOs, but an increase in both CW and digital contacts. Station demographics from this year showed that small club efforts are still the most common entry. However, not

all Field Day sites are hosted by clubs. Some participants enjoyed setting up a single station all to themselves, while others took the opportunity to get together with a few friends to operate over the weekend. We received summaries from stations operating in remote locations and others that made it as far as their backyard. We also saw a sharp increase in the number of single transmitter home entries, which may have been in part due to heavy precipitation that many areas experienced.

QSOs with the ISS and W1AW

One highlight for many Field Day participants this year was a contact with Commander Reid Wiseman, operating as NA1SS onboard the International Space Station. The astronaut made an extraordinary and successful effort to contact as many amateurs as possible during several North American passes. We would like to thank Commander Wiseman for taking the time out of his busy schedule to participate, as well as ARISS and NASA for helping coordinate the operation. If you worked NA1SS, don't forget to send in your

Members of the Navarre CERT ARC prepare to launch a tethered weather balloon that supported a long wire antenna. While providing an excellent method of antenna support, the balloon also served to bring curious visitors to the site. [Steve Van Den Akker, W4SJV, photo]

request to receive an ISS QSL card documenting the contact.

As we celebrate our 100th anniversary with the Centennial QSO Party, operators around the world attempt to make as many contacts as possible with W1AW portable. Field Day weekend was no exception. This year the Columbia Amateur Radio Association and the Potomac Valley Radio Club were back again as a 28A and operated under the call sign W1AW/3. Diane, KE3TT, blogged about the event and titled her post, "Yes, OM, That's Two Eight Alpha." That was surely a phrase heard many times over the weekend as they made over 11,000 contacts.

Time Well Spent

On Sunday afternoon, after operating came to an end, tired participants knew that there was still work to be done. The breakdown of the

sites began and with the help of gravity, things always seem to come down much more quickly than they go up. Logs were collected, coax was coiled, radios were carefully packed away, and sites were cleaned of any

remaining items to ensure hosts would welcome us back. Reading through the soapbox comments, e-mails and notes scribbled on paper Field Day summary sheets, there is a recurring theme. No matter how difficult the challenges were over the weekend, the majority of participants noted how much they are looking forward to Field Day next year. This reflects the important role of Field Day in both maintaining the enthusiasm of existing participants while providing a valuable context for bringing new amateurs into the hobby. We look forward to working you from the field again next year, on June 27 and 28, 2015.

Scores

Score listings are grouped according to the number of transmitters in simultaneous operation and their entry class. The listings show club or group name, call sign(s) used, total number of QSOs, number indicating power output used (5 is less than 5 W, 2 is less than 150 W; 1 is more than 150 W), number of participants and total score including bonus points and ARRL section. Entries are listed from highest to lowest claimed score in each class. Class A stations are clubs or groups portable with 3 or more participants. Class B stations are portables with one or two participants. When there are two operators, the other operator's call is listed in parentheses, if it is known. Class C stations are mobiles. Class D stations are home stations using commercial power. Class E stations are home stations using emergency power. Class F stations are EOC stations.
