Our Cover

Don Kirk, WB8DSB, hunts down radio frequency interference in the 160-meter and 80-meter bands with his 2-foot-tall by 4-foot-long portable flag antenna. The antenna is the largest size — to maximize gain — that would fit inside his car, but still small enough to maintain a directional pattern from 1.8 to 30 MHz. With an appropriate preamp, the flag is useful for direction finding even in the AM broadcast band. This issue also features build instructions for a Moxon antenna for 222 MHz, as well as a dc power polarity checker. [Chris Kirk, photo]
